World Environment Day: A focus on Biodiversity Net Gain

This webinar will provide an introduction on World Environment Day, leading into an overview from Spencer Clubb (IEMA) on the BNG policy. We will then be guided through case study examples by Zoe Webb (Arup) that demonstrates the potential and challenges that BNG can bring when working with clients on the ground to deliver projects. As usual there will then be an opportunity for a question and answer session to conclude the webinar.

World Environment Day 2020

- Never has it been clearer that we need to protect biodiversity and the ecosystem services it provides
- Biodiversity and climate are inseparable. Restoring nature and slowing the loss of biodiversity is our primary defence against climate breakdown
- This is where Biodiversity Net Gain comes in as a policy tool to stop the loss and start the replenishment of biodiversity.
- You can see the IPBES for the current state of global biodiversity if you want to learn more about the current situation that we are in.
